

Draft Conditions of Save Our Sperrins

1. No water from the mining operation will be allowed to enter any downstream waterway without treatment, including the water that seeps through the liner of the Dry Stack Facility and then enters the system of underdrains.
2. All water that enters downstream waterways through outlet pipes will be monitored and required to meet the relevant Environmental Quality Standards at the mouth of the outlet pipe.
3. If the gold concentrate from the Curraghinalt Gold project is processed using cyanide, it can be processed only at a facility that is a signatory of the International Cyanide Management Code.
